

6. Scenario for Group Work (3 Hours)

Scenario for Group Work (3 Hours)

The middle tank of a cascading system of three ancient tanks has been breached by a flood in 1975. It has been not rehabilitated until 2000.

A community of 600 farmer families suffer drought impact due to this. The tank is within a Divisional secretariat jurisdiction. The road that ran over the bund has also fallen into disuse crating much inconvenience to the community. An NGO wishes to contribute to the rehabilitation.

Draw a Venn Diagram to show relationships between stakeholders that would be needed to take it on as a development project.

What in your opinion would be the DRR components that you could achieve and what could be considered as development spillovers from its completion? What lessons learnt (hypothetically) can you bring in to DRR?
